## **Adult**

## **Closed airway** suction system

Repeated endotracheal suctioning performed with conventional disposable catheters involves disconnection of the patient from the ventilator – a procedure which is not without complications and risks.

Especially in patients depending on high PEEP levels or suffering from haemodynamic instability, interruption of ventilation can lead to:

- arterial and mixed venous oxygen desaturation
- loss of lung volume
- alveolar derecruitment in hypoxemic patients
- increase in mean arterial pressure and heart rate

TY-CARE, TY-CARE exel and TY-CARE Neo/Ped are designed to remain part of the breathing system during suctioning without disconnecting ventilatory support and thus maintaining respiratory parameters.

## Superior hygiene and protection

Open suctioning exposes both the patient and the hospital staff to the risk of cross-contamination.

TY-CARE, TY-CARE exel and TY-CARE exel Neo/Ped closed suction systems protect patient's airway from environmental pathogens and prevents hospital staff from exposure to aerosolized germs expelled by the patient during open suctioning. This is particularly important for infective and immunodepressed patients.

TY-CARE, TY-CARE exel and TY-CARE exel Neo/Ped are cost-effective and easy to use allowing one-user suctioning procedures and reducing daily consumption of single use material.

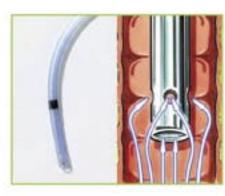

## **TY-CARE** exel

## Adult

#### ATRAUMATIC DUAL DENSITY SUCTION CATHETER

the flexible, ultrasoft and rounded distal tip of TY-CARE suction catheter reduces possible lesions of the tracheal mucosa, while the firmer proximal portion allows easy manipulation of the suction catheter via the protective sleeve.

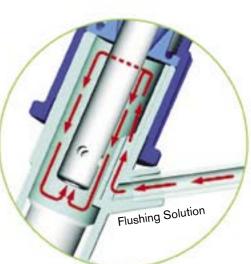

## Minimal invagination risks of the tracheal mucosa

the lateral eyes ensure a uniform airflow around the catheter tip and reduce resistance. If one or more of the eyes become occluded whilst coming into contact with the tracheal wall, suction is automatically diverted through the remaining eyes, minimising the risk of invagination of the tracheal mucosa.

#### **Enhanced patient comfort**

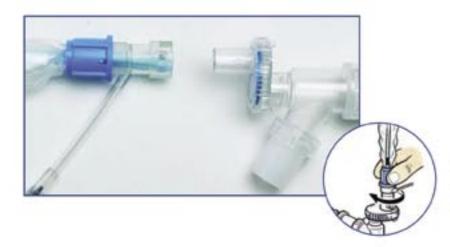

double swivel elbow (DSE): 360° rotation for patient's comfort and reduced torque. Its unique design offers reduced resistence to ventilation airflow.

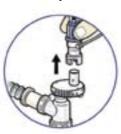

#### **Rotating patient access valve**

TY-CARE exel patient access valve enables the complete isolation of the sleeved suction catheter from the patient's airway when suctioning is not required, thus maintaining ventilation and preventing inadvertent lavage. The light-weight and clear components of the access valve allow to clearly identify when the device is in the open/closed position for an increased ease of use.

#### Replaceable catheter

TY-CARE exel suction catheter can be detached and replaced whilst maintaining a closed circuit without the need to discard the whole system.

## Fiberoptic bronchoscophy and mucus sampling in a closed system

thanks to the detachable suction catheter and a sterile self-sealing cap included in the packaging, TY-CARE exel maintains system integrity during procedures such as fiberoptic bronchoscopy and mucus sampling. The self-sealing cap accommodates different sized bronchoscopes (up to 6 mm diameter).

## MDI (Metered Dose Inhaler)

for a more effective, quick and convenient drug delivery

## RESPIFLOTM S PAK (10 vials 15 ml each)

flushing saline vials included in the kit for ease of use at the time of catheter tip rinsing.

## T-piece version (CPAP) (only available with TY-CARE exel)

designed for endotracheal and tracheostomy intubated patients with continuous flow ventilation (CPAP).

## Coudé version (only available with TY-CARE exel)

catheter with directional tip for selective bronchial suctioning.

catheter with additional lumen for saline solution instillation into the trachea to allow a more effective suctioning of dry secretions.

#### **TY-CARE**

Tyco closed suction system range also features a more traditional version: TY-CARE.

TY-CARE does have most of the TY-CARE exel features except for the rotating patient access valve and detachable catheter.

# Neonatal Paediatric

#### **TY-CARE** exel Neo/Ped

TY-CARE exel Neo/Ped system has been developed based on the state-of-the art technology of the adult version (e.g. It features an atraumatic tip with side holes to avoid potential damages from the catheter contact with the trachea). At the same time TY-CARE exel Neo/Ped has additional features specifically designed for neonatal and paediatric patients.

space is minimized and patient fully isolated

## Neonatal Paediatric

TY-CARE exel Neo/Ped

Full control

suction control valve features a

transparent body for full secretion inspection.
ISO colour coded caps for immediate

catheter size recognition.
Tethered vacuum cap for full safety.
